

# WHEELS & BRAKES

high performance for Aircraft

www.beringer-aero.com

## Van's RV10

## Technical specifications

### More Safety :

Tubeless mounting (less risk of tire puncture)

### High performance :

Progressive rise in performance and better control of the brakes allow to reduce the stopping distance dramatically

### Weight saving :

The wheels are CNC machined from aluminum billet.

This manufacturing process makes BERINGER wheels 2 to 3 times stronger than cast wheels, allowing an optimized design in order to save weight.

### A simple maintenance:

Installation of the system is straight-forward. The sealed bearings don't need to be greased. Tire changing is easy with the split-rim wheels (only one O-ring). The process to change rotors and pads is simple. The fluid lines are braided stainless steel-protected.

## A complete Upgrade step by step

- 1- Fuselage kit (P/N SRVFU01) : 634 €  
Master brake cylinders for pilot- hydraulic hoses/fittings
- 2- Finishing kit (P/N SRVFI05) : 2444 €  
Main wheels 6.00-6", with High Energy calipers, discs, stock axle adaptation parts for Bolt on conversion, tubeless tires
- 3- Nose wheel kit (P/N SRVFI01) : 541 €  
Nosewheel 5.00-5" with axle and tubeless tire

*(co-pilot brakes and parking brake valve are optional)*

*(Prices are retail prices without VAT)*

## Tubeless wheels for greater safety
